  Certificate in Programming for the Web with JavaScript

  Completed in 2022

About Me

From the moment I created my first game on Scratch at just twelve years of age, I knew I was hooked on the world of Software Development. It offered an exciting challenge to continually learn and improve my skills, and nine years later, I became a competent Frontend Developer. I am a dedicated and detail-oriented professional with a broad technical skill set. I am a focused Frontend Developer offering exceptional responsive design skills and a talent for developing intuitive interfaces.

Experience

Docere Health (Internship) - Frontend Developer
2023 - Present

Key responsibilities:
- Write functional documentation and guides
- Design quality mockups and wireframes
- Collaborate with back-end developers to improve usability
- Use React.JS to create quality user-interface

Netflix Clone
ounetflixclone.vercel.app

A clone of the Netflix Streaming Service. This application was designed using React.JS. It uses react hooks and multiple components and utilizes the TMDB API through JavaScript XML and CSS.

Weather Application
ouweatherapp.netlify.app

A simple weather application that displays the weather of the users' location when loaded and also allows users to search for the weather information of any city in the world. It displays information like current temperature, humidity, and more. This app was designed using React.JS and depends on the openweather API.

Activities and Interests

I love traveling and being outdoors, participating in outdoor sports, and always learning! I am currently an Intern at Docere Health as a Frontend Developer. Spending time with friends, family and working in teams is something I really enjoy!
